# DEMOPAD

DemoPad is a revolutionary software solution that allows an integration partner to simply and quickly develop an affordable, customised touchscreen control system without the high costs traditionally associated with advanced control systems. DemoPad is the fastest and most affordable way to integrate and control audio, video, lighting, heating, cooling and security system's directly from your PC, tablet or smart phone device.

One of the most important features of a successful and usable home or commercial control system is an easy-to-use GUI (Graphical User Interface). Ease of operation and bespoke graphics make the difference between a standard installation and a world-class control experience. To deliver these impressive interfaces, most control systems require a significant level of computer coding completed by expensive software engineers. This is what makes DemoPad different.

The new CENTRO 8 processor from DemoPad now provides industry partners with the perfect integrated hardware solution to complement the software. With the CENTRO 8 processor an integrator can open up powerful new features such as astronomically timed events, advanced macro's, web server control, HDMI output and remote access. DemoPad now has the unique ability to control and automate potentially hundreds of sensors and devices within any installation environment.

Demopad is an IP-based solution that sends control signals to WIFI-connected devices, such as lighting controls, HVAC, audio, video, CCTV and lots more. For devices such as TV's, amplifiers, projectors or blinds that are not IP enabled, an installer can integrate alternative methods of control such as IR or RS-232 by using the CENTRO 8 processor or IP gateways.

This simple hardware set up is combined with the intuitive DemoPad custom design software to create a completely customised interface for the end user. Complete projects are uploaded to any tablet or smart phone using a DemoPad end user app which is available through the Apple store or from Demopad (Android app purchases are made through DemoPad).
