Impact Lighting Inc. Data Sheet for ThinGlow™

3528 WW AND CW Series
12V (600 pcs) Indoor

Address : 2101 West Central Blvd. Orlando Florida 32805
Tel : 1-800-507-5714
Fax : 1-800-507-5714
Web Site : www.impactlightinginc.com

The Strip was made by Flexible Printed Circuit Board and 3528 Top LED. The LED is even, large and high brightness lighting effect. Also it is soft and easy bended for installation. The cutting unit is 25mm and 3 pieces LED per group, so you could cut a different length for your project and request. The Strip is working on 12V DC and passed CE EMC testing. Suitable for both indoor & outdoor decorative application

3528 Flexible Strip (12V)

Product Features:

1. Color temperature can be adjusted by Control System from 3000K to 7000k to satisfy different color requirements.
2. Input voltage: DC12V
3. Super bright top SMD 3528 LED as lighting sources
4. Different colors are available
5. Every 3-LED are cuttable for DC12V strips, 6-LED are cuttable for DC24V strips
7. With 3M adhesive tape on backside

Product Information:

Model No.	Color	LED Qty	(CT:K)	Luminous Flux	Work Voltage	Power	View Angle	Waterproof	Packing
IL-TG-3528-WW-CW-12v	Warm White Pure White	SMD3528 120/m Super Bright	3000-7000K	Warm White: 540lm-600lm Pure White: 600lm-700lm	DC12V DC24V	19.2W/m	120°	No	5m/reel

1. Tolerance of measurement of luminous intensity is ±10%
2. The dominant wavelength λd is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
3. Specifications are subject to change without notice.
4. θ1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.

Dimension Drawing

Remark:

1. All dimensions are in millimeter.
2. Tolerance of measurement is ±0.05mm (.02") unless others otherwise noted.

Installation drawing

CAUTIONS

Exploitation conditions

1. In order to guarantee that the LED life and the use environment, cannot make any force when the product lighting use to pull the power cables, forbids to collide, in order to avoid damages LED.
2. For can better lighting effect of the product, each 5 meter long strip must connect the main power source.
3. Must guarantee that each power source (GND) must connect.
4. Should not be curving in the diameter 60mm following radian, please do not rebate, in order to avoid damage lamp bead or break.

Storage

1. The Flexible SMD Strip should be stored at stored at 0 °C ~ +60 °C or less and 40% ~ 70% RH or less after being shipped and the storage life limits are 3 months.
2. If the Flexible SMD Strip is stored more then 3 months, they can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material.
3. Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

Static Electricity

1. Static electricity or surge voltage damages the Flexible SMD Strip.
2. It is recommended that a wristband or an anti-electrostatic glove be used when handling the Flexible SMD Strip.
3. All devices, equipment and machinery must be properly grounded.
4. It is recommended that measures be taken against surge voltage to the equipment that mounts the Flexible SMD Strip.

Heat Generation

1. Thermal design of the end product was most importance. Please consider the heat generation of the Flexible SMD Strip when making the system design.
2. The thermal resistance of the circuit board and density of Flexible SMD Strip placement on the board, as well as other components was the important factor affecting the coefficient of temperature increase per input electric power.
3. It must be avoid intense heat generation and operate within the maximum ratings given in the specification.
4. The operating current should be decided after considering the ambient maximum temperature of Flexible SMD Strip.

Others

1. Care must be taken to ensure that the reverse voltage will not exceed the absolute maximum rating when using the Flexible SMD Strip with matrix drive.
2. The Flexible SMD Strip described in this brochure is intended to be used for ordinary electronic equipment (such as office equipment, communications equipment, measurement instruments and household appliances). Consult Dilux Lighting's sales staff in advance for information on the applications in which exceptional quality and reliability are required, particularly when the failure or malfunction of the Flexible SMD Strip may directly jeopardize life or health (such as for airplanes, aerospace, submersible repeaters, nuclear reactor control systems, automobiles, traffic control equipment, life support systems and safety devices).
3. User shall not reverse engineer by disassembling or analysis of the Flexible SMD Strip without having prior written consent from Dilux Lighting. When defective Flexible SMD Strip is found, the User shall inform Dilux Lighting directly before disassembling or analysis.

Warning

- Please note the careful operation, in the power source connection's situation, will touch the alternating current supply end possibly to cause your safety.
- In the actual application, the power source should retain 20% remainders, guaranteed that the sufficiency the voltage lightens LED.
- Installs as far as possible the product in the appropriate environment.
- Pays attention to the power cable in the installment process positive and negative extremely, please do not wrong, power source and product voltage to be whether correct, in order to avoid creates the product the damage.
